1. A brief introduction about myself and the role of Peer Leading.
   a. The difference between TA and Peer Leader... (Well actually I think that Peer Leader is not going
to work over the lab with them pretty much, but will review the material they learn the previous day
because the lab problem will be taken care of by TA... However, this issue can be brought up by students
whether they strongly want to get more help for their lab. Please let me know if I am right because I would
like to let them know as well).

   b. The good thing to work in team for review session (because I want to set them into small team with
which they will work together for about 1/2 first semester, another team will be conducted if it is
necessary... this can be done by team evaluation at the end of the session after 1 month).

All of this work will take about 10 minutes to finish.

2. (In case for ice breaking--my session is on Thursday and they already met each other on Tuesday so I am
not sure I want to do this)

I'd like the idea of introducing people around to get to know each other. But maybe I want to try a different
method. I would like to ask them to write down 3 columns

   First, their names
   Second, 3 things they do for habit or favourite activity, mark them from 1-3 (optional)
   Third, chose their favourite colour out of 3-4 (which I will give them).
   5-7 minutes will be used for this part.

   By this, then I will ask them to go around the room and find the people who have the same colour with
them. Form a temporary group based on the colour they choose. Then they can start to introduce
themselves among their groups. This will take around 10 minutes to complete.

3. I already prepare a review for them based on what they learn the previous section with their professor.
The review will be done by group and submitted to me. They will not be allowed to use book but "human
intelligence" because most of the materials they already knew.

4. I already divide them into groups and place the role: recorder, time keeper and an explainer. I intend that
after they finish their work, each group will present the problem by the explainer to the other group and
convince them about the result they get.
