Lesson Plan for Lab9  
CS 1401, Thursdays 7:30 a.m.

I. Arrays

Group work:

a) I will divide the group in two teams. Then, I will use a game where each student of every team will write down on the board just one step of a given problem, and then another student will write the next step and so on. The problem will be different for each team. First team which computes correctly the problem will be the winner. (20 minutes)

b) Still in teams, I will pick randomly one student from each team in order to trace the program. Each team should help their teammate on the board. (10 minutes)

Individual work:

c) I will give to students a sheet with three exercises to solve them during the workshop. (8 minutes)

d) Then, I will choose three students to explain their answers. (7 minutes)
